

Wiring guide for the FlySky FS-i6 FS-iA6B Receiver to the Lake Reaper Bait Boat

From Howes Models

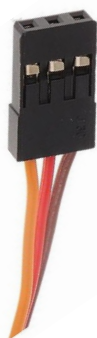

Positive Pin (middle one)
Signal Pin
Negative Pin

Channel 1 (Labelled PPM/CH1)

This is the channel for the rudder/steering control. The wire that needs to be plugged in here and is usually labelled '111'. This will be a Orange-Red-Brown wire. When plugging in, make sure the brown wire is on the right sided 'Negative' pin on the receiver (labelled on image shown).

(If your wire is not labelled '111' then it will be the Orange-Red-Brown wire which is labelled with the lowest number)

Channel 6 (Labelled CH6)

This is the channel for the hopper pin control. The wire that needs to be plugged in here is usually labelled '444' or '666'. This will be a Orange-Red-Brown wire. When plugging in, make sure the brown wire is on the right sided 'Negative' pin on the receiver (labelled on image shown). The top right round silver dial on your handset will now control your hopper pin open/close.

(If your wire is not labelled '444' or '666' then it will be the Orange-Red-Brown wire with the highest number on it)

Howes Models LTD

Channel 3 (Labelled CH3)

This is the channel for the throttle forward/reverse control. The wire that needs to be plugged in here is usually labelled '222'. This will be a White-Red-Black wire. When plugging in, make sure the black wire is on the right sided 'Negative' pin on the receiver (labelled on image shown).

(If your wire is not labelled '222' then it will be the only White-Red-Black wire)

This wire comes from your ESC which is located in the same black box the receiver sits in at the front of the boat)

This is how the receiver should look once everything is wired in correctly.
